## Flexguard: The action sports wrist guard – designed by a sports trauma surgeon for maximum protection

*Specialising in the design, manufacturing and distribution of extreme sports protection gears, the Docmeter company has developed the best performing wrist guard on the market.*

Many action sports like roller blading, mountain biking and snowboarding result in a high number of wrist injuries. In response, Docmeter specially developed the Flexguard: a patented wrist guard that has proved its efficiency by significantly reducing risks of wrist fracture (67% of wrist fracture diminution in independent studies), with no other injuries higher up the arm (forearm, elbow or shoulder).

The Flexguard wrist guards have the following protection features:

- a **thermoplastic dorsal splint** in Hytrel® (by Du Pont™) which is flexible, with high memory. It absorbs shocks and prevents harmful wrist hyperextension thanks to its progressive hinge system.

- The Flexguards also include a highly resistant **palm protector**. It is attached with Velcro, so can be easily removed to use the wrist guards under snow gloves or mittens.

## Flexguard perfectly mirrors the wrist anatomy to ensure security and flexibility during use.

If you would like to enhance your safety in action sports, then you should seriously consider investing in a pair of Flexguard wrist guards.

The Flexguard wrist guards are already available in many shops which deal in Docmeter products. You can buy Flexguard wrist guards at the recommended retail price of 44€ (all taxes included).

The Docmeter range will provide you with the best protection gear for all circumstances.
